

Spatial distribution of adjusted psychometric associations with alpha reactivity

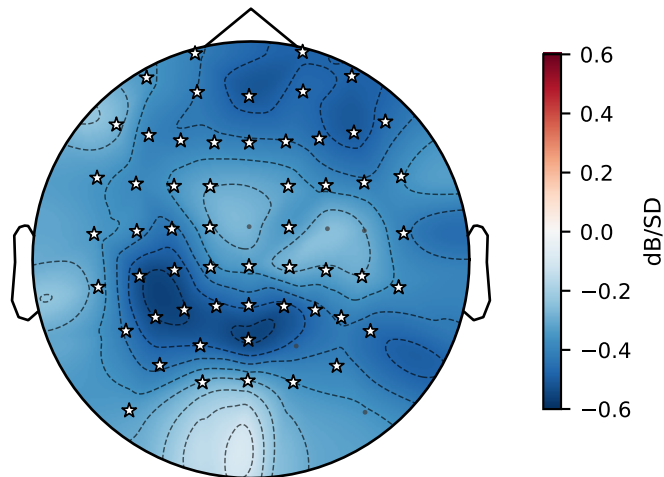

(A) STAI — absolute reactivity

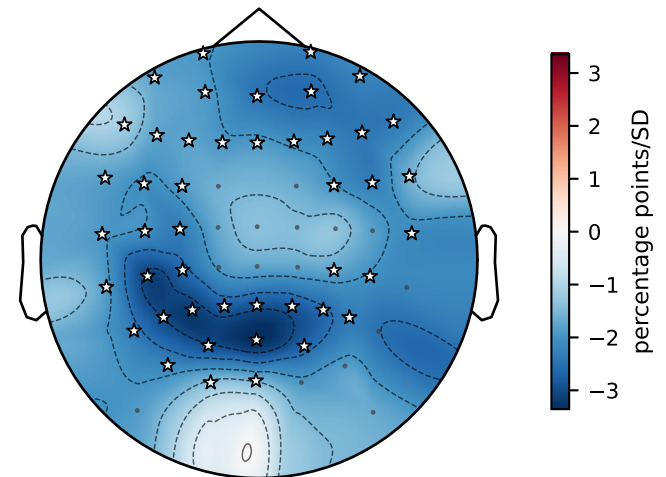

(B) STAI — relative reactivity

(C) MSPSS — absolute reactivity

(D) MSPSS — relative reactivity

Color = directional linear estimate (0/244 coefficients survive within-map BH-FDR). Stars = significant total 3-df spline association; stars do not mark a significant slope.

No nonlinear component survived within-map BH-FDR (0/244). Black dots mark sensors; the head circle is the interpolation boundary.
